Project Report

Companies Financial Report 2016-2025

Power BI Dashboard Analysis of 25 Indian Companies

Submitted by: Syed Shoyeb
Date: 11 October 2026

1. Business Requirement and KPIs

Management wanted one place to compare the financial health of 25 leading Indian companies across ten years (2016-2025). The questions were: who earns the most, how much of that revenue turns into profit, and how do assets and liabilities relate to profit? A Power BI dashboard was built to answer these in a single view.

KPI	Value on dashboard	Meaning
Sum of Revenue	33M	Total revenue of all companies, 2016-2025
Sum of Expenses	26M	Total operating expenses over the same period
Sum of Total Profit	7M	Revenue minus expenses (33M - 26M)
Sum of Profit Margin	5K	Sum of each record's margin % (see Section 6)

2. The Dashboard

The dashboard is titled **Companies Financial Report 2016-2025** and combines seven visuals: a revenue trend line by company and year, KPI cards, a revenue-vs-expenses pie chart, a clustered chart of profit, assets and liabilities by company, a ranked revenue bar chart, an automatically generated insights panel, and sector cards (Eicher Motors - Automobile, Godrej Consumer - FMCG, HCLTech - IT Services, HDFC Bank - Banking).

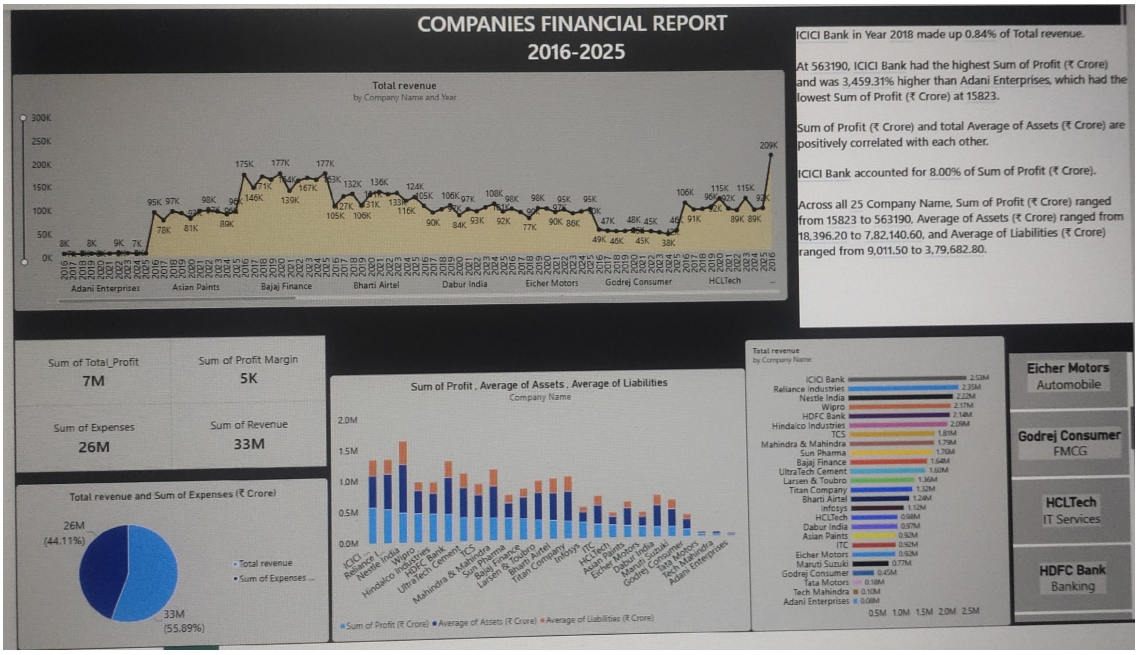

Figure 1 - Companies Financial Report dashboard (Power BI)

3. Data Used

- **Coverage:** 25 companies, yearly figures from 2016 to 2025.
- **Fields:** Company Name, Year, Sector, Total Revenue, Expenses, Profit, Profit Margin, Assets and Liabilities (all in Rs. Crore as labelled on the dashboard).
- **Sectors covered:** Banking, IT Services, FMCG, Automobile and others.
- **Calculated measures:** Sum of Profit, Average of Assets, Average of Liabilities, Sum of Total Profit and Profit Margin were created in Power BI.

4. Descriptive Analysis - What Happened

Across all companies and years, total revenue is about 33M against expenses of about 26M. Expenses take roughly 44% of the total and the remaining 56% is revenue, which leaves a profit of about 7M. Put differently, expenses consume about 79% of revenue, so the overall profit margin is close to 21%.

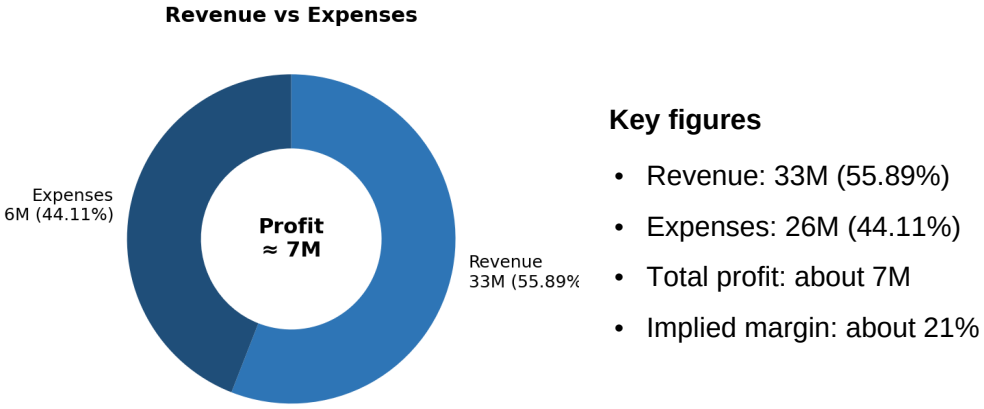

Figure 2 - Revenue vs expenses, all companies 2016-2025

Company ranking. ICICI Bank leads total revenue at 2.53M, followed by Reliance Industries (2.35M), Nestle India (2.22M), Wipro (2.17M) and HDFC Bank (2.14M). At the other end, Tata Motors (0.18M), Tech Mahindra (0.10M) and Adani Enterprises (0.08M) report the lowest totals.

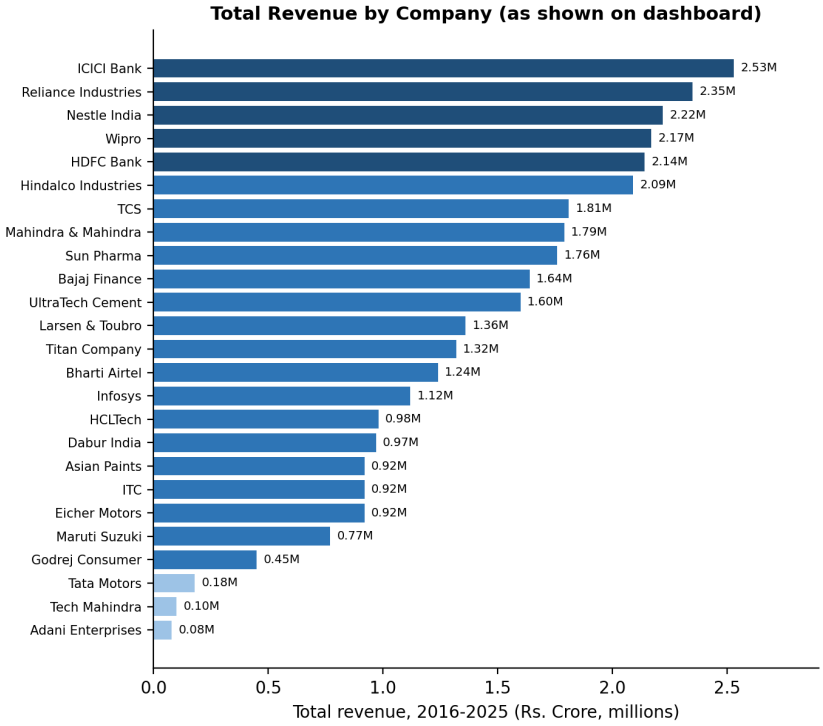

Figure 3 - Total revenue by company (values read from the dashboard)

Revenue trend. The line chart of revenue by company and year shows that most company-year values sit between roughly 80K and 180K, with a few peaks, and the single highest point is about 209K. The lowest values (about 7K-9K) belong to the early years of the smallest series. The company-level trend lines are therefore driven more by which company is being viewed than by one common year-wise pattern.

Profit, assets and liabilities. Across the 25 companies, Sum of Profit ranges from 15,823 to 5,63,190, Average of Assets from 18,396.20 to 7,82,140.60, and Average of Liabilities from 9,011.50 to 3,79,682.80. The dashboard's insight panel also reports that profit and assets are positively correlated.

5. Diagnostic Analysis - Why It Happened

- **Size drives profit.** ICICI Bank earned the highest profit (5,63,190), about 3,459% higher than Adani Enterprises (15,823), the lowest. ICICI alone accounts for 8.00% of total profit. Companies with larger asset bases generally earn larger profits, which fits the positive correlation reported by the dashboard.
- **Banking and large conglomerates dominate.** ICICI Bank and HDFC Bank are both in the top five by revenue, as are Reliance Industries, Nestle India and Wipro.
- **Revenue is concentrated.** The top five companies contribute about 34% of total revenue, while the bottom three contribute only about 1%. A handful of companies therefore shape the overall totals.
- **High expense ratio.** With expenses at about 79% of revenue, a small rise in costs would reduce profit sharply, so cost control matters as much as revenue growth.

6. Key Insights and Data Notes

- The overall picture is healthy: revenue exceeds expenses, giving a profit of about 7M, or roughly 21% of revenue.
- **Profit Margin card (5K):** this is a sum of percentages across records, which is not a meaningful business number. A weighted average (Total Profit / Total Revenue) should be used instead.
- **Very low revenue for Tata Motors, Tech Mahindra and Adani Enterprises** (0.08M-0.18M) looks unusual next to peers of similar scale. The source data for these companies should be checked for missing years before conclusions are drawn.
- The ICICI Bank 2018 insight (0.84% of total revenue) is a single company-year share and should not be read as a trend.

7. Recommendations to Management

- Track profit margin as *Total Profit / Total Revenue* rather than a sum of margins, and add it as a year-wise line so changes are visible.
- Study the top performers (ICICI Bank, Reliance, Nestle India, Wipro, HDFC Bank) to see which cost and asset practices lift their profit, and benchmark the lower-ranked companies against them.
- Review expense control: at about 79% of revenue, even a 1-2 point cost saving would raise total profit noticeably.
- Validate the data for the lowest-revenue companies and add a sector filter so Banking, IT, FMCG and Automobile can be compared like-for-like.
- Reduce dependence on a few large companies by monitoring the mid-ranked group (ranks 6-22), which holds about 65% of revenue.

8. Tools Used

- **Microsoft Power BI** - data model, DAX measures (sums and averages), KPI cards, line, bar, pie and clustered charts, and the automatic insights panel.
- **Microsoft Excel** - source data preparation and cleaning.
- **Python (matplotlib, ReportLab)** - supporting charts and this PDF report.

Note: figures are read from the dashboard screenshot; totals shown as M are rounded as displayed. Derived values (margin, shares) are calculated from those rounded figures.
